# JUMS 3.0 TIPS

**Tip 1:  Data Conversion from JUMS 2.4 to JUMS 3.0**

If you have data in JUMS 2.4 that you wish to convert to JUMS 3.0, the school code and the UIC without the first "W" in the System Setup of JUMS 2.4 must match the school code and UIC in JUMS 3.0.   To convert data from JUMS 2.4 to JUMS 3.0, both programs must be loaded on the same computer.

EXAMPLE:  Your UIC in JUMS 3.0 is W12345 and your school code is 5678.  In JUMS 2.4 your UIC should be entered as 12345.  NOTE:  All UICs start with W1.  The 1 is the number one and not the letter I.

INSTRUCTIONS:  To enter or edit your UIC and school code in JUMS 2.4, go to File and System Setup.  Go to the box labeled UIC, enter your JUMS 3.0 UIC <u>without</u> the first W.  Next click on the ARMY button to enter your school code, click OK and then click Save.  Refer to the below sample of the System Setup screen in JUMS 2.4.

**System Setup U.S. Army**

**Superintendent**
Name: WILLIAM GATES
Title: BIG BOSS
Street: PATCH ROAD
City State Zip: FORT MONROE, VA 23651

**Enter your school code here.**

## Tip 2: Instructions for Converting JUMS Data at a Later Time

To convert data from JUMS 2.4 to JUMS 3.0 at a later time, go to the C:\ drive, Program Files, Unit Management System. Open the Unit Management System folder and double click on the Convert FoxPro To JUMS.exe icon and follow the instructions in **Step 11. Convert Existing Fox Pro Data** of the booklet that came with the JUMS 3.0 CD.

## Tip 3: Backing up JUMS 3.0 Data to Floppy Disks

Make sure that you are using clean, 1.44 MB formatted floppy disks. The floppy disk must be inserted in the disk drive before you begin the backup. Windows 95/98 users unable to backup to floppy disks we have a revised JUMS.exe file to correct this problem. To get a copy of the revised JUMS.exe file, send an email message to jumshelp@monroe.army.mil.

## Tip 4: Restoring JUMS 3.0 Data from a Zip Drive

Copy the .hdr file and the backup file from the ZIP disk to a location on the hard drive and restore from the hard drive.

## Tip 5: Incorrect UIC in JUMS 3.0

If the UIC listed for your school is not correct, send an email message to jumshelp@monroe.army.mil. Enter Incorrect UIC and the name of your school in the Subject. In the body of the message state that the UIC in JUMS is incorrect and list the correct UIC, the name of your school, your school code, school address, and your name and telephone number. A patch will be sent back to you to correct the UIC.

## Tip 6: Could Not Start SQL Server Service Manager

If the MSDE did not load in your list of programs, follow these steps:

1. Uninstall MSDE by
   a. Click Start
   b. Click Settings
   c. Click Control Panel

d. Click Add/Remove Programs
e. Look for MSDE in the program list.  If it is there then remove it.  If it is not listed, then go to step 2.
2. Delete the MSSQL7 folder from Windows Explorer.  Also delete the Unit Management System Folder under Program Files.
3. Remove the MSSQL keys from the registry.

**NOTE: Use great care when editing the Windows Registry, errors during editing will have catastrophic consequences for your computer**

a. Click Start
b. Click Run
c. Type:  REGEDIT
d. Hit Enter
e. The registry editor screen will come up.
f. Double-click HKEY_LOCAL_MACHINE
g. Double-click SOFTWARE
h. Double-click MICROSOFT
i. Scroll down to the listings that begin with M.  Look for the following keys:
    i. MSDE – if you have this one, then delete it.
    ii. MSSQLSERVER – if you have this one, then open it by double-clicking and read what is underneath it.  If there is anything in there other than CLIENT, then delete all the keys except client.
    (to delete a key, you simply highlight the key and the push the delete button on the keyboard)
4. Try running the JUMS 3.0 installation again.

NOTE:  Some people are rebooting the system if it takes longer than a minute to copy the MSDE files – this will interrupt the installation.  The first thing the MSDE installation process does is write a key that says the program exists.  So, if you stop it in the middle of an install, you won't be able to install again without deleting registry keys.  The MSDE installation process takes several minutes even on a fast computer, so please be patient during this process.

**Tip 7:  The SQL Server Service Manager Stopped Running**
Restart the SQL Server Service Manager.  Click the Start button on your desktop taskbar, select Programs, select MSDE, and click Service Manager.   Click the Start/Continue button and click the checkbox by Auto-start service when OS starts. If this checkbox is not checked, the SQL Server Service Manager will stop running each time you turn your computer off.
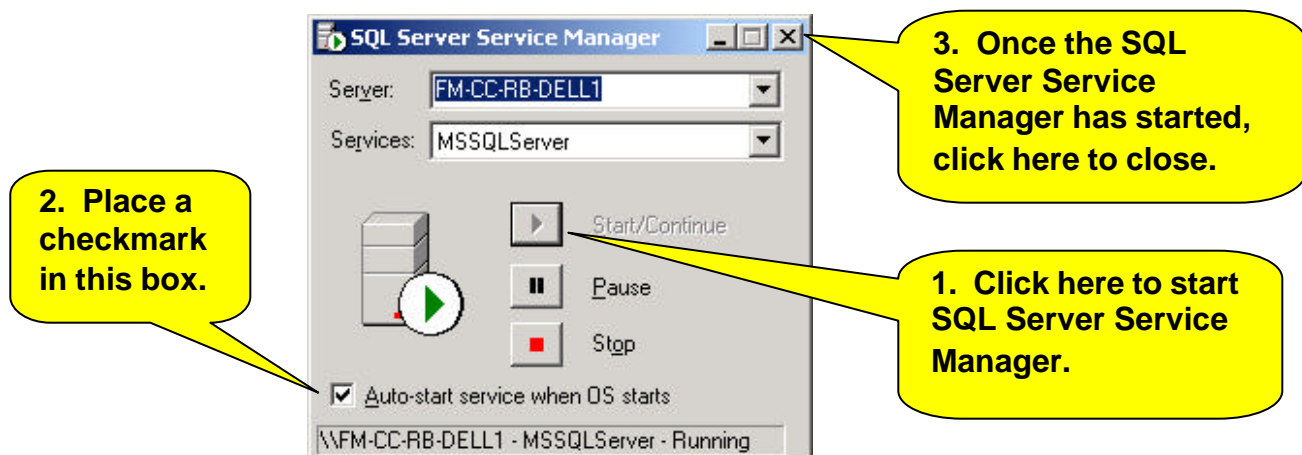

**Tip 8.  Shuttle Run Percentile Scores in JUMS 3.0 are Incorrect**
The shuttle run percentile scores in JUMS 3.0 do not match the scores posted in Unit 4, Instructor's Manual.  To correct the shuttle run percentile scores, install the SHUTTLE PATCH and follow these installation instructions.

1.  Save the SHUTTLEPATCH.XXX file to your JUMS PROGRAM \INBOX folder.  This should be   c:\program files\unit management system\inbox.

2.  To save the SHUTTLEPATCH.XXX file to the JUMS Program INBOX, double click on the patch icon and select Save it to disk.   In the Save In box choose your C:\ drive, open Program Files, open Unit Management System, open INBOX, then click Save.

3.  Use My Computer or Windows Explorer to select your JUMS PROGRAM \INBOX folder.  Choose your C:\ drive, open Program Files, open Unit Management System, open INBOX.

4.  Right click on file SHUTTLEPATCH.XXX and rename the file to SHUTTLEPATCH.EXE

5.  Double click SHUTTLEPATCH.EXE to update your Fitness Shuttle Score table.

SHUTTLEPATCH.XXX

**Tip 9.  JUMS HOW TO Tutorial**
The JUMS HOW TO tutorial is located on your C:\ drive.  Refer to Step 10 in your installation booklet for JUMS 3.0.  To use the tutorial, go to My Computer, open your C:\ drive, look for the JUMS HOW TO folder and double click on it to open it and look for SlideShow.exe.  Double click on SlideShow.exe to open it.

**Tip 10.  Activating the Clothing Order Button**
If the Order button in the clothing supply module is not highlighted, it can be activated from the Unit Setup screen.  From the main screen click File, Setup, select Unit, click Edit, look for Enable Clothing Order and select YES from the drop down menu, then click the Save button.
